FORCE
BIKE COMPONENTS FOR YOU

Company KCK Cyklosport-Mode s.r.o. was founded in 1991 and this year was also beginning of the brand FORCE. At this time there were only 20 items in stock.

We started to focus more on our own brand FORCE around year 2008 and the aim was to build up a first-rate Czech cycling brand.

Now you can find everything what you need for cycling under brand FORCE – from components and spare parts to clothes, sunglasses, helmets as well as equipments like lights, oils etc.
We offer aproximately 3 000 items of brand FORCE in stock. Our main target is to bring quality products for reasanable price and we are making efforts to offer products in economic and also in the top version. For example in our clothes there are economic models for reasonable price and also professional high-quality products made from Italian materials and completely made in Italy too.

We always want to support Cycling here in Czech Republic but thanks to our partners all over Europe and other countries which sell FORCE products abroad (Denmark, Poland, Portugal, Italy, Austria, Hungary and many others) we are able to support foreign athletes as well.
Very successful partner is in Denmark, where FORCE products are very popular and very high rated from riders. We also have a long time close cooperation with well known brand from Italy - Wilier company.

In Czech Republic is several teams which we sponzor - SKC Pardus Tufo Prostějov, CK Příbram Fany Gastro, Titan Trilife Triathlon Club….but it is not always only about traditional cycling. Among clubs we support there is also cyclo-polo (cyclo-ball) team from Zlín which wins regularly on international level.

Another famous names, part of our FORCE family, are Fojtík brothers.

A few years ago we started to support also professional teams and for the first time this year we will support 4 european continental teams: Vorarlberg (AT), Hurom (PL), Neri-Selle-Italia-KTM (IT), L. A. Aluminios (PT).... And also it's 5th season we have our professional MTB team WILIER 7C FORCE with a star and captain of the team Massimo Debertoliss.
In 2016 we moved to new and bigger space and currently we modernized our warehouse and sotware. Our goal every year is to move forward piece by piece and offer only the best to our customers.

We thank to all our customers for their cooperation.

Dalibor Kmenta & KCK FORCE Team.

Polycarbonate black, blue a red laser lenses

Black, Gray and or Smoke lens are best suited to sunny conditions - they reduce bright sunlight, making it easy for your eyes.
These lens can be coated with a color coating to match them with other accessories. The properties remain the same as for black lens.

Suitable for: sunny days.

Polycarbonate clear laser lenses

Clear lens does not change your vision, so it works great under dark conditions when you need to protect your eyes from dirt and harmful ultraviolet rays.

Suitable for: dark conditions such as forest, shadow or night ride.

Polycarbonate brigthening laser lenses

The transition between the orange, brown and yellow lens works well in darker, cloudy weather.
Brightening lens are popular among athletes and are sought after to improve the depth of view in low light conditions.
These lens will help you better identify the contours of paths and routes.

Suitable for: ride in low light conditions.

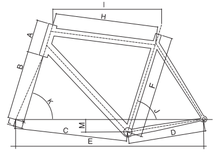

Polycarbonate photochromatic laser lenses

These are lens that range from bright to dark, depending on the sun. If you are in the sun, they will be dark, if you are in the shade, they will either be very dark or bright.

Suitable for: changing weather, frequent alternation between light and dark environments.

IN-MOULD TECHNOLOGY

The type of IN-MOULD helmets is derived from the use of a hard plastic outer shell which is relatively thin.
Inside the shell is an EPS foam (foam polystyrene) that absorbs shocks.
EPS foam and plastic shell are pressed together, reducing pressure during impact and reinforcing the area of ventilation openings.
The result is a durable, uniform, lightweight and safe helmet.
